

Digital Transformation Strategy in Manufacturing Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Digital Transformation in Manufacturing is redefining how industries design, produce, and deliver value in the era of Industry 4.0, smart factories, IoT integration, AI-driven analytics, and cloud-based operations. Digital Transformation Strategy in Manufacturing Training Course is designed to equip professionals with a deep understanding of how digital technologies, automation, data intelligence, and connected ecosystems are reshaping modern manufacturing environments. Participants will explore how to build a scalable and sustainable digital transformation strategy that enhances productivity, reduces operational costs, improves quality control, and accelerates innovation across the manufacturing value chain.

As global competition intensifies, manufacturers must adopt advanced manufacturing technologies, predictive maintenance systems, digital twins, robotics process automation (RPA), and real-time data analytics to remain competitive. This course bridges the gap between traditional manufacturing systems and next-generation smart manufacturing ecosystems. It empowers leaders, engineers, and decision-makers to implement end-to-end digital transformation roadmaps, enabling agility, resilience, and customer-centric production models in the evolving smart industry landscape.

Programme Curriculum

Digital Transformation Strategy in Manufacturing Training Course

Introduction

Digital Transformation in Manufacturing is redefining how industries design, produce, and deliver value in the era of Industry 4.0, smart factories, IoT integration, AI-driven analytics, and cloud-based operations. Digital Transformation Strategy in Manufacturing Training Course is designed to equip professionals with a deep understanding of how digital technologies, automation, data intelligence, and connected ecosystems are reshaping modern manufacturing environments. Participants will explore how to build a scalable and

sustainable digital transformation strategy that enhances productivity, reduces operational costs, improves quality control, and accelerates innovation across the manufacturing value chain.

As global competition intensifies, manufacturers must adopt advanced manufacturing technologies, predictive maintenance systems, digital twins, robotics process automation (RPA), and real-time data analytics to remain competitive. This course bridges the gap between traditional manufacturing systems and next-generation smart manufacturing ecosystems. It empowers leaders, engineers, and decision-makers to implement end-to-end digital transformation roadmaps, enabling agility, resilience, and customer-centric production models in the evolving smart industry landscape.

Course Duration

5 days

Course Objectives

1. Understand Industry 4.0 transformation frameworks in manufacturing
2. Develop digital transformation roadmaps for smart factories
3. Implement IoT-enabled manufacturing ecosystems
4. Leverage AI and machine learning in production optimization
5. Integrate cloud computing in manufacturing operations
6. Apply predictive maintenance and asset intelligence strategies
7. Enable real-time data analytics and decision-making systems
8. Design digital twin models for production simulation
9. Improve supply chain digitization and visibility
10. Enhance cybersecurity in industrial environments
11. Optimize robotic process automation (RPA) in manufacturing workflows
12. Drive lean manufacturing through digital tools
13. Build sustainable and smart manufacturing ecosystems

Target Audience

1. Manufacturing Plant Managers
2. Industrial Engineers
3. Operations Managers
4. Supply Chain Professionals
5. IT & OT Integration Specialists
6. Production Supervisors
7. Digital Transformation Consultants
8. Engineering Students & Researchers

Course Modules

Module 1: Industry 4.0 Fundamentals

- Evolution from Industry 1.0 to 4.0
- Smart factory ecosystem overview
- Core enabling technologies
- Digital maturity models
- Case Study: Siemens Smart Factory Transformation

Module 2: IoT in Smart Manufacturing

- Industrial IoT architecture
- Sensor integration in production lines
- Machine-to-machine communication
- Real-time monitoring systems
- Case Study: Bosch IoT Manufacturing Optimization

Module 3: Artificial Intelligence & Predictive Analytics

- AI in quality control
- Machine learning for defect prediction
- Predictive maintenance systems
- Data-driven production planning
- Case Study: General Electric Predictive Maintenance System

Module 4: Digital Twins Technology

- Concept of digital twins
- Simulation of manufacturing systems
- Virtual testing of production processes
- Real-time synchronization with physical assets
- Case Study: Airbus Digital Twin Aircraft Manufacturing

Module 5: Cloud Manufacturing Systems

- Cloud-based ERP systems
- SaaS manufacturing solutions
- Data storage and scalability
- Hybrid cloud integration
- Case Study: Toyota Cloud Manufacturing Integration

Module 6: Robotics and Automation

- Industrial robotics applications
- RPA in manufacturing workflows
- Human-robot collaboration
- Automation ROI analysis
- Case Study: Tesla Gigafactory Automation Model

Module 7: Smart Supply Chain Digitization

- End-to-end supply chain visibility
- Blockchain in supply chain tracking
- Demand forecasting tools
- Logistics automation systems
- Case Study: Amazon Smart Supply Chain System

Module 8: Cybersecurity & Digital Governance

- Industrial cybersecurity risks
- OT and IT security integration
- Data protection frameworks
- Compliance and governance models

- Case Study: Siemens Industrial Cybersecurity Framework

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	\$1,500
14 Sep 2026	18 Sep 2026	Physical	\$1,500

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$1,500
05 Oct 2026	09 Oct 2026	Physical	\$1,500
12 Oct 2026	16 Oct 2026	Physical	\$1,500
19 Oct 2026	23 Oct 2026	Physical	\$1,500
26 Oct 2026	30 Oct 2026	Physical	\$1,500
