

Digital Twin for Manufacturing Systems Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Digital Twin for Manufacturing Systems Training Course is designed to equip professionals with the skills to design, develop, and deploy real-time digital replicas of physical manufacturing assets. Leveraging advanced technologies such as Industrial IoT (IIoT), Artificial Intelligence (AI), Machine Learning (ML), Cloud Computing, Edge Computing, and Simulation Modeling, this course empowers learners to transform traditional factories into smart, connected, and data-driven smart manufacturing ecosystems. Participants will gain hands-on expertise in building scalable cyber-physical systems, enabling predictive maintenance, process optimization, and operational efficiency across modern Industry 4.0 environments.

In today's rapidly evolving industrial landscape, Digital Twin technology is revolutionizing manufacturing by enabling real-time monitoring, predictive analytics, and virtual commissioning of production systems. This training provides deep insights into smart factory architecture, real-time data integration, sensor fusion, and advanced simulation techniques, making it ideal for engineers, data scientists, automation specialists, and operations managers. By the end of the course, learners will be able to implement end-to-end Digital Twin solutions that enhance productivity, reduce downtime, and support AI-driven decision-making in intelligent manufacturing systems.

Programme Curriculum

Digital Twin for Manufacturing Systems Training Course

Introduction

Digital Twin for Manufacturing Systems Training Course is designed to equip professionals with the skills to design, develop, and deploy real-time digital replicas of physical manufacturing assets. Leveraging advanced technologies such as Industrial IoT (IIoT), Artificial Intelligence (AI), Machine Learning (ML), Cloud Computing, Edge Computing, and Simulation Modeling, this course empowers learners to transform traditional factories into

smart, connected, and data-driven smart manufacturing ecosystems. Participants will gain hands-on expertise in building scalable cyber-physical systems, enabling predictive maintenance, process optimization, and operational efficiency across modern Industry 4.0 environments.

In today's rapidly evolving industrial landscape, Digital Twin technology is revolutionizing manufacturing by enabling real-time monitoring, predictive analytics, and virtual commissioning of production systems. This training provides deep insights into smart factory architecture, real-time data integration, sensor fusion, and advanced simulation techniques, making it ideal for engineers, data scientists, automation specialists, and operations managers. By the end of the course, learners will be able to implement end-to-end Digital Twin solutions that enhance productivity, reduce downtime, and support AI-driven decision-making in intelligent manufacturing systems.

Course Duration

10 days

Course Objectives

1. Master Digital Twin Architecture for Smart Manufacturing
2. Understand Industrial IoT (IIoT) Integration and Connectivity
3. Implement Real-Time Data Acquisition and Sensor Networks
4. Develop AI-Driven Predictive Maintenance Models
5. Design Cyber-Physical Production Systems (CPPS)
6. Apply Machine Learning for Manufacturing Optimization
7. Build Simulation-Based Digital Factory Models
8. Enable Cloud-Based Digital Twin Deployment
9. Integrate Edge Computing in Smart Factories
10. Analyze Big Data for Manufacturing Intelligence
11. Optimize Production Lines using Digital Twin Simulation
12. Implement Virtual Commissioning and Testing Systems
13. Enhance Operational Efficiency through Smart Automation

Target Audience

1. Manufacturing Engineers
2. Automation and Control Engineers
3. Industrial IoT Developers
4. Data Scientists in Manufacturing
5. Plant Managers and Operations Managers
6. Mechanical and Electrical Engineers
7. Smart Factory Consultants
8. Industry 4.0 Technology Enthusiasts

Course Modules

Module 1: Introduction to Digital Twin Technology

- Concept of Digital Twin in Manufacturing
- Evolution from CAD to Smart Twins
- Types of Digital Twins (Product, Process, System)
- Industry 4.0 and Smart Factory Overview

- Case Study: Boeing Digital Twin Aircraft Manufacturing

Module 2: Smart Manufacturing Ecosystem

- Components of Smart Manufacturing
- Cyber-Physical Systems Overview
- Automation and Robotics Integration
- Smart Factory Architecture
- Case Study: Siemens Smart Factory Model

Module 3: Industrial IoT (IIoT) Foundations

- IIoT Devices and Sensors
- Connectivity Protocols (MQTT, OPC-UA)
- Real-Time Data Streaming
- Sensor Data Management
- Case Study: GE Predix Industrial IoT Platform

Module 4: Data Acquisition and Integration

- Data Collection Techniques
- Edge vs Cloud Data Processing
- Data Cleaning and Preprocessing
- Real-Time Data Pipelines
- Case Study: Bosch Manufacturing Data Systems

Module 5: Simulation Modeling in Manufacturing

- Discrete Event Simulation
- 3D Factory Modeling
- Process Simulation Tools
- Scenario Analysis
- Case Study: Toyota Production Simulation System

Module 6: Artificial Intelligence in Digital Twins

- AI Algorithms for Manufacturing
- Predictive Analytics Models
- Pattern Recognition Systems
- Optimization Algorithms
- Case Study: Tesla Predictive Manufacturing AI

Module 7: Machine Learning Applications

- Supervised and Unsupervised Learning
- Anomaly Detection in Machines
- Predictive Maintenance Models
- Training Data Preparation
- Case Study: Rolls-Royce Engine Monitoring System

Module 8: Cloud Computing for Digital Twins

- Cloud Infrastructure for Manufacturing

- SaaS, PaaS, IaaS Models
- Scalable Data Storage
- Cloud Simulation Platforms
- Case Study: AWS Industrial Digital Twin Deployment

Module 9: Edge Computing in Smart Factories

- Edge vs Cloud Processing
- Low-Latency Data Processing
- Edge AI Models
- Real-Time Decision Systems
- Case Study: ABB Robotics Edge Integration

Module 10: Cyber-Physical Systems Design

- CPS Architecture
- Feedback Control Systems
- Integration of Physical and Digital Layers
- System Interoperability
- Case Study: Mitsubishi Smart Factory CPS

Module 11: Predictive Maintenance Systems

- Condition Monitoring Techniques
- Failure Prediction Models
- Maintenance Scheduling Optimization
- Sensor-Based Diagnostics
- Case Study: Siemens Predictive Maintenance Platform

Module 12: Virtual Commissioning

- Virtual Testing Environments
- PLC Simulation
- Error Detection Before Deployment
- Time and Cost Reduction Strategies
- Case Study: Festo Virtual Factory Commissioning

Module 13: Digital Twin Visualization Tools

- 3D Visualization Platforms
- Real-Time Dashboards
- AR/VR Integration
- HMI Systems
- Case Study: Dassault Systèmes 3DEXPERIENCE Platform

Module 14: Manufacturing Process Optimization

- Lean Manufacturing with Digital Twins
- Bottleneck Analysis
- Resource Optimization
- KPI Monitoring Systems
- Case Study: Ford Production Line Optimization

Module 15: Future of Smart Manufacturing

- Autonomous Manufacturing Systems
- AI-Driven Factories
- Blockchain in Manufacturing
- Sustainability and Green Manufacturing
- Case Study: Amazon Smart Robotics Fulfillment Centers

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.com or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	18 Sep 2026	Physical	\$3,000
14 Sep 2026	25 Sep 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
28 Sep 2026	09 Oct 2026	Physical	\$3,000
05 Oct 2026	16 Oct 2026	Physical	\$3,000
12 Oct 2026	23 Oct 2026	Physical	\$3,000
19 Oct 2026	30 Oct 2026	Physical	\$3,000
26 Oct 2026	06 Nov 2026	Physical	\$3,000
