

Disaster-Resilient Construction Training Course

Professional Development Training Course Outline

Category	Architectural Engineering	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Disaster-Resilient Construction Training Course is designed to equip engineers, architects, builders, urban planners, and infrastructure developers with advanced skills in climate-resilient design, seismic-resistant structures, flood-proof architecture, and sustainable disaster mitigation strategies. With the increasing frequency of earthquakes, floods, hurricanes, cyclones, landslides, and climate-induced hazards, the construction industry is undergoing a major transformation toward resilient infrastructure development and smart risk-informed engineering practices. This training integrates global standards such as UNDRR frameworks, ISO disaster risk management guidelines, and green building codes, ensuring participants can design structures that withstand extreme environmental stress while maintaining functionality and safety.

The course emphasizes practical, technology-driven approaches including Building Information Modeling (BIM), geospatial risk mapping, AI-based hazard prediction, and resilient materials engineering. Participants will gain hands-on exposure to real-world disaster scenarios, enabling them to design infrastructure that minimizes economic losses, protects human life, and supports rapid post-disaster recovery. By integrating sustainable urban development, smart cities resilience planning, and climate adaptation engineering, this program builds a new generation of professionals capable of delivering future-ready, disaster-proof infrastructure systems.

Programme Curriculum

Disaster-Resilient Construction Training Course

Introduction

Disaster-Resilient Construction Training Course is designed to equip engineers, architects, builders, urban planners, and infrastructure developers with advanced skills in climate-resilient design, seismic-resistant structures, flood-proof architecture, and sustainable disaster mitigation strategies. With the increasing

frequency of earthquakes, floods, hurricanes, cyclones, landslides, and climate-induced hazards, the construction industry is undergoing a major transformation toward resilient infrastructure development and smart risk-informed engineering practices. This training integrates global standards such as UNDRR frameworks, ISO disaster risk management guidelines, and green building codes, ensuring participants can design structures that withstand extreme environmental stress while maintaining functionality and safety.

The course emphasizes practical, technology-driven approaches including Building Information Modeling (BIM), geospatial risk mapping, AI-based hazard prediction, and resilient materials engineering. Participants will gain hands-on exposure to real-world disaster scenarios, enabling them to design infrastructure that minimizes economic losses, protects human life, and supports rapid post-disaster recovery. By integrating sustainable urban development, smart cities resilience planning, and climate adaptation engineering, this program builds a new generation of professionals capable of delivering future-ready, disaster-proof infrastructure systems.

Course Duration

5 days

Course Objectives

1. Understand principles of disaster-resilient infrastructure design
2. Apply earthquake-resistant construction techniques in structural engineering
3. Develop skills in flood mitigation and stormwater management systems
4. Integrate climate change adaptation strategies in construction planning
5. Use Building Information Modeling (BIM) for risk-sensitive design
6. Analyze hazard vulnerability and disaster risk assessment models
7. Design wind-resistant and cyclone-proof buildings
8. Implement sustainable and green building technologies
9. Evaluate structural failure patterns in natural disasters
10. Apply smart city resilience frameworks and urban safety planning
11. Use AI and GIS for disaster prediction and mapping
12. Develop emergency response and post-disaster reconstruction strategies
13. Ensure compliance with global building codes and safety standards

Target Audience

1. Civil Engineers & Structural Engineers
2. Architects & Urban Planners
3. Construction Project Managers
4. Government Infrastructure Officers
5. Disaster Risk Management Professionals
6. Environmental Engineers & Climate Specialists
7. Real Estate Developers
8. NGOs & Humanitarian Relief Planners

Course Modules

Module 1: Fundamentals of Disaster-Resilient Construction

- Principles of resilient engineering design
- Types of natural and man-made disasters
- Risk-based construction planning

- Introduction to global resilience standards
- Structural safety fundamentals
- **Case Study:** Post-earthquake reconstruction analysis of Nepal 2015

Module 2: Earthquake-Resistant Design Systems

- Seismic load analysis techniques
- Base isolation and damping systems
- Structural reinforcement methods
- Retrofitting existing buildings
- Earthquake zoning maps
- **Case Study:** Japan earthquake-resistant skyscraper design

Module 3: Flood & Water-Resilient Infrastructure

- Floodplain mapping and hydrological modeling
- Elevated construction techniques
- Drainage and stormwater systems
- Coastal protection infrastructure
- Flood barriers and levees
- **Case Study:** Netherlands flood defense system (Delta Works)

Module 4: Wind, Cyclone & Storm-Resistant Structures

- Aerodynamic building design
- Wind load calculations
- Roof and façade reinforcement
- Coastal cyclone shelters design
- Emergency evacuation design integration
- **Case Study:** Hurricane-resistant homes in Florida, USA

Module 5: Climate-Responsive & Sustainable Construction

- Green building materials
- Carbon-neutral construction practices
- Passive cooling and heating systems
- Energy-efficient infrastructure
- Climate adaptation design principles
- **Case Study:** Singapore sustainable smart city development

Module 6: Smart Technologies in Disaster Resilience

- AI-based disaster prediction systems
- GIS mapping for hazard zones
- IoT-based structural monitoring
- Digital twin construction models
- Real-time risk assessment tools
- **Case Study:** Smart earthquake monitoring system in California

Module 7: Emergency Planning & Post-Disaster Recovery

- Rapid damage assessment techniques

- Temporary shelter design
- Reconstruction logistics planning
- Disaster recovery financing models
- Community resilience strategies
- **Case Study:** Haiti post-earthquake rebuilding program

Module 8: Codes, Standards & Global Compliance

- International building codes (IBC, ISO)
- Local construction regulations
- Safety auditing and inspections
- Certification processes
- Legal frameworks in disaster construction
- **Case Study:** Enforcement of seismic codes in Chile

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	\$1,500
14 Sep 2026	18 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$1,500
05 Oct 2026	09 Oct 2026	Physical	\$1,500
12 Oct 2026	16 Oct 2026	Physical	\$1,500
19 Oct 2026	23 Oct 2026	Physical	\$1,500
26 Oct 2026	30 Oct 2026	Physical	\$1,500
