

Energy Optimization in Manufacturing Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Energy Optimization in Manufacturing is a critical discipline designed to help industrial organizations reduce operational costs, improve energy efficiency, and achieve sustainable production goals. With rising global energy prices, carbon emission regulations, and increasing ESG (Environmental, Social, Governance) expectations, manufacturers are under pressure to adopt smart energy management systems, lean energy practices, and digital optimization technologies. Energy Optimization in Manufacturing Training Course equips professionals with the latest strategies in industrial energy efficiency, smart manufacturing, and decarbonization frameworks to transform energy-intensive operations into high-performance, low-carbon production systems.

The course integrates modern approaches such as IoT-enabled energy monitoring, AI-driven predictive analytics, renewable energy integration, and lean manufacturing optimization techniques. Participants will learn how to identify energy losses, implement cost-saving interventions, and design sustainable energy systems aligned with Industry 4.0 standards. This program is ideal for organizations aiming to enhance productivity while meeting global sustainability targets and achieving competitive advantage through energy-efficient manufacturing transformation.

Programme Curriculum

Energy Optimization in Manufacturing Training Course

Introduction

Energy Optimization in Manufacturing is a critical discipline designed to help industrial organizations reduce operational costs, improve energy efficiency, and achieve sustainable production goals. With rising global energy prices, carbon emission regulations, and increasing ESG (Environmental, Social, Governance) expectations, manufacturers are under pressure to adopt smart energy management systems, lean energy

practices, and digital optimization technologies. Energy Optimization in Manufacturing Training Course equips professionals with the latest strategies in industrial energy efficiency, smart manufacturing, and decarbonization frameworks to transform energy-intensive operations into high-performance, low-carbon production systems.

The course integrates modern approaches such as IoT-enabled energy monitoring, AI-driven predictive analytics, renewable energy integration, and lean manufacturing optimization techniques. Participants will learn how to identify energy losses, implement cost-saving interventions, and design sustainable energy systems aligned with Industry 4.0 standards. This program is ideal for organizations aiming to enhance productivity while meeting global sustainability targets and achieving competitive advantage through energy-efficient manufacturing transformation.

Course Duration

5 days

Course Objectives

1. Improve industrial energy efficiency optimization strategies
2. Implement smart manufacturing energy management systems
3. Reduce carbon footprint in manufacturing operations
4. Apply lean energy consumption techniques
5. Enhance sustainable production and green manufacturing practices
6. Utilize IoT-based energy monitoring solutions
7. Integrate AI and machine learning for energy forecasting
8. Optimize utility cost reduction in factories
9. Develop energy audit and benchmarking capabilities
10. Strengthen renewable energy integration in industry
11. Implement Industry 4.0 energy optimization tools
12. Improve operational excellence through energy analytics
13. Achieve net-zero manufacturing transformation goals

Target Audience

1. Manufacturing Plant Managers
2. Energy Managers and Sustainability Officers
3. Industrial Engineers and Process Engineers
4. Operations and Production Supervisors
5. Facility and Maintenance Engineers
6. Environmental Health & Safety (EHS) Professionals
7. Consultants in Energy and Sustainability
8. Corporate ESG and Compliance Officers

Course Modules

Module 1: Fundamentals of Energy Optimization in Manufacturing

- Overview of industrial energy systems
- Energy consumption patterns in factories
- Key performance indicators (KPIs) for energy efficiency
- Energy loss identification techniques
- Case Study: Energy baseline analysis in an automotive plant reducing 12% energy waste

Module 2: Industrial Energy Auditing & Benchmarking

- Energy audit methodologies (walkthrough, detailed, investment-grade)
- Benchmarking against global standards
- Data collection and measurement tools
- Identifying high-energy consumption equipment
- Case Study: Textile factory reducing electricity costs by 18% through audit-driven improvements

Module 3: Smart Manufacturing & IoT Energy Monitoring

- IoT sensors for real-time energy tracking
- Digital dashboards for energy visualization
- Cloud-based energy management systems
- Predictive maintenance integration
- Case Study: Smart factory reducing downtime energy loss by 22%

Module 4: Lean Manufacturing & Energy Waste Reduction

- Lean principles applied to energy usage
- Kaizen for energy improvement
- Waste identification in production lines
- Continuous improvement cycles
- Case Study: Food processing plant reducing steam energy waste by 15%

Module 5: AI & Data Analytics for Energy Optimization

- Machine learning for energy prediction
- Big data analytics in manufacturing systems
- Pattern recognition in energy usage
- Automated decision-making tools
- Case Study: Electronics manufacturer improving energy forecasting accuracy by 30%

Module 6: Renewable Energy Integration in Industry

- Solar, wind, and hybrid systems in factories
- Energy storage systems and microgrids
- ROI analysis for renewable investments
- Grid interaction and energy balancing
- Case Study: Cement plant reducing grid dependency by 25% using solar integration

Module 7: Carbon Management & Sustainability Compliance

- Carbon accounting methodologies
- ESG reporting frameworks
- Net-zero roadmap development
- Regulatory compliance strategies
- Case Study: Chemical plant achieving ISO 50001 certification

Module 8: Advanced Energy Optimization Strategy & Implementation

- Energy strategy development roadmap
- Digital twin technology in energy systems

- Investment planning and ROI evaluation
- Change management in energy transformation
- Case Study: Multinational manufacturing hub achieving 20% overall energy savings

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	\$1,500

Start Date	End Date	Location	Price
14 Sep 2026	18 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$1,500
05 Oct 2026	09 Oct 2026	Physical	\$1,500
12 Oct 2026	16 Oct 2026	Physical	\$1,500
19 Oct 2026	23 Oct 2026	Physical	\$1,500
26 Oct 2026	30 Oct 2026	Physical	\$1,500
