

Fluid Systems in Manufacturing Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Fluid Systems in Manufacturing form the backbone of modern industrial production, enabling precision control, energy transfer, and automation efficiency across hydraulic and pneumatic applications. Fluid Systems in Manufacturing Training Course is designed to build strong expertise in industrial fluid power systems, hydraulics, pneumatics, process automation, and smart manufacturing integration, aligning with the latest Industry 4.0, IoT-enabled monitoring, and predictive maintenance technologies.

With increasing demand for optimized production systems, reduced downtime, and energy-efficient operations, professionals must understand advanced fluid dynamics, control valves, actuators, pumps, compressors, and electro-hydraulic systems. This course provides a hands-on, industry-driven learning experience to enhance operational reliability, system troubleshooting, and advanced manufacturing performance in modern smart factories.

Programme Curriculum

Fluid Systems in Manufacturing Training Course

Introduction

Fluid Systems in Manufacturing form the backbone of modern industrial production, enabling precision control, energy transfer, and automation efficiency across hydraulic and pneumatic applications. Fluid Systems in Manufacturing Training Course is designed to build strong expertise in industrial fluid power systems, hydraulics, pneumatics, process automation, and smart manufacturing integration, aligning with the latest Industry 4.0, IoT-enabled monitoring, and predictive maintenance technologies.

With increasing demand for optimized production systems, reduced downtime, and energy-efficient operations, professionals must understand advanced fluid dynamics, control valves, actuators, pumps, compressors, and electro-hydraulic systems. This course provides a hands-on, industry-driven learning experience to enhance operational reliability, system troubleshooting, and advanced manufacturing performance in modern smart

factories.

Course Duration

10 days

Course Objectives

1. Understand fundamentals of hydraulic and pneumatic systems in manufacturing
2. Apply fluid mechanics principles in industrial automation
3. Analyze pressure, flow, and control system dynamics
4. Develop skills in smart manufacturing fluid integration (Industry 4.0)
5. Implement predictive maintenance strategies for fluid systems
6. Operate and troubleshoot hydraulic pumps, valves, and actuators
7. Optimize energy efficiency in fluid power systems
8. Integrate IoT sensors in fluid monitoring systems
9. Enhance system reliability and fault diagnosis techniques
10. Understand electro-hydraulic and electro-pneumatic controls
11. Improve process automation using PLC-based fluid control
12. Ensure safety compliance in industrial fluid systems
13. Develop expertise in advanced manufacturing fluid system design

Target Audience

1. Mechanical engineers in manufacturing industries
2. Maintenance and reliability engineers
3. Industrial automation technicians
4. Production supervisors and plant managers
5. Mechatronics engineering students
6. HVAC and fluid power specialists
7. Industrial safety and operations professionals
8. Technical trainers and engineering educators

Course Modules

Module 1: Introduction to Fluid Systems

- Basics of fluid mechanics in industry
- Types of fluids used in manufacturing
- System components overview
- Industrial applications of fluid power
- Safety fundamentals
- **Case Study:** Automotive assembly line hydraulic press system analysis

Module 2: Hydraulics Fundamentals

- Pascal's Law applications
- Hydraulic system structure
- Pressure and force control
- Hydraulic fluids properties
- System efficiency factors
- **Case Study:** Hydraulic lift system in manufacturing plant

Module 3: Pneumatic Systems

- Compressed air systems
- Air preparation units
- Pneumatic actuators
- Flow control methods
- Leak detection techniques
- **Case Study:** Packaging industry pneumatic conveyor system

Module 4: Pumps and Compressors

- Types of hydraulic pumps
- Compressor working principles
- Efficiency optimization
- Maintenance practices
- Failure diagnosis
- **Case Study:** CNC machine hydraulic pump failure analysis

Module 5: Control Valves

- Directional control valves
- Pressure control valves
- Flow regulation techniques
- Valve actuation methods
- Valve selection criteria
- **Case Study:** Injection molding valve timing optimization

Module 6: Actuators and Cylinders

- Linear and rotary actuators
- Cylinder design principles
- Load handling capacity
- Speed and force control
- Wear and tear management
- **Case Study:** Robotic arm actuator calibration

Module 7: Fluid Power Circuits

- Circuit design fundamentals
- Open vs closed systems
- Circuit simulation tools
- Efficiency improvement methods
- Troubleshooting strategies
- **Case Study:** Industrial stamping press circuit optimization

Module 8: Electro-Hydraulics

- Electrical integration with hydraulics
- Sensors and switches
- Control logic systems
- PLC-based hydraulic control
- Automation interfaces

- **Case Study:** Automated hydraulic press control system

Module 9: Electro-Pneumatics

- Solenoid valve operations
- Electrical signal integration
- Control panel design
- Industrial automation linkage
- Fault diagnostics
- **Case Study:** Bottling plant pneumatic control automation

Module 10: Industrial Automation Integration

- PLC fundamentals
- SCADA integration
- Smart sensors in fluid systems
- Data acquisition systems
- Real-time monitoring
- **Case Study:** Smart factory fluid monitoring system

Module 11: Fluid System Maintenance

- Preventive maintenance planning
- Predictive maintenance tools
- Lubrication systems
- Wear analysis techniques
- Downtime reduction strategies
- **Case Study:** Predictive maintenance in steel manufacturing

Module 12: Energy Efficiency Optimization

- Energy loss identification
- System optimization techniques
- Eco-friendly fluid systems
- Pressure reduction strategies
- Cost-saving methods
- **Case Study:** Energy-efficient hydraulic system retrofit

Module 13: Industrial Safety Standards

- OSHA and ISO standards
- Hazard identification
- Pressure safety management
- Emergency protocols
- Risk mitigation strategies
- **Case Study:** Hydraulic system safety failure prevention

Module 14: Smart Manufacturing & IoT

- IoT-enabled fluid monitoring
- Real-time analytics
- Predictive algorithms

- Cloud-based monitoring systems
- Digital twin applications
- **Case Study:** IoT-enabled hydraulic system in smart factory

Module 15: Advanced System Design

- Custom system design principles
- Simulation software usage
- Industrial case modeling
- Optimization techniques
- Future trends in fluid systems
- **Case Study:** Next-gen automated manufacturing fluid system design

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.com or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commencement of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	18 Sep 2026	Physical	\$3,000
14 Sep 2026	25 Sep 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
28 Sep 2026	09 Oct 2026	Physical	\$3,000
05 Oct 2026	16 Oct 2026	Physical	\$3,000
12 Oct 2026	23 Oct 2026	Physical	\$3,000
19 Oct 2026	30 Oct 2026	Physical	\$3,000
26 Oct 2026	06 Nov 2026	Physical	\$3,000
