

# Geospatial AI (GeoAI) for Spatial Research Training Course

## Professional Development Training Course Outline

|          |                            |               |                         |
|----------|----------------------------|---------------|-------------------------|
| Category | Research and Data Analysis | Duration      | 5 Days                  |
| Base Fee | \$1,500 USD                | Delivery Mode | Online / On-site Hybrid |

### Course Introduction

The emerging field of Geospatial Artificial Intelligence (GeoAI) is transforming the way researchers gather, process, and analyze spatial data—especially when engaging with sensitive or controversial topics such as human rights, environmental justice, conflict mapping, and public health surveillance. As GeoAI fuses machine learning, geospatial technologies, and big data, it enables insightful spatial analysis while presenting unique ethical and methodological challenges. Geospatial AI (GeoAI) for Spatial Research Training Course aims to empower participants with the skills to responsibly and effectively apply GeoAI tools in spatial research involving sensitive socio-political, cultural, and humanitarian issues.

This specialized training is designed for professionals, researchers, and analysts who must navigate the complexities of ethical data sourcing, algorithmic fairness, and privacy concerns. Through a hands-on approach integrating case studies, real-world datasets, and AI-driven mapping techniques, participants will build the competence to lead sensitive geospatial research projects while adhering to best practices in data governance, bias mitigation, and ethical AI usage.

### Programme Curriculum

#### Geospatial AI (GeoAI) for Spatial Research Training Course

##### Introduction

The emerging field of Geospatial Artificial Intelligence (GeoAI) is transforming the way researchers gather, process, and analyze spatial data—especially when engaging with sensitive or controversial topics such as human rights, environmental justice, conflict mapping, and public health surveillance. As GeoAI fuses machine learning, geospatial technologies, and big data, it enables insightful spatial analysis while presenting unique ethical and methodological challenges. Geospatial AI (GeoAI) for Spatial Research Training Course aims to empower participants with the skills to responsibly and effectively apply GeoAI tools in spatial research involving sensitive socio-political, cultural, and humanitarian issues.

This specialized training is designed for professionals, researchers, and analysts who must navigate the complexities of ethical data sourcing, algorithmic fairness, and privacy concerns. Through a hands-on approach integrating case studies, real-world datasets, and AI-driven mapping techniques, participants will build the competence to lead sensitive geospatial research projects while adhering to best practices in data governance, bias mitigation, and ethical AI usage.

### Course Objectives

1. Understand the fundamentals of Geospatial AI (GeoAI) and its role in sensitive spatial research.
2. Analyze ethical challenges and regulatory frameworks in using AI for geospatial analysis.
3. Explore techniques for privacy-preserving data collection and anonymization in spatial datasets.
4. Leverage machine learning algorithms to detect patterns in humanitarian and conflict zones.
5. Apply deep learning models to satellite imagery for sensitive area analysis.
6. Evaluate AI bias and fairness in geospatial predictions and decision-making.
7. Integrate open-source geospatial tools with AI for scalable spatial research.
8. Build interactive geospatial dashboards to communicate findings responsibly.
9. Utilize remote sensing data with AI models to monitor environmental and social issues.
10. Conduct risk assessment and mitigation in handling sensitive geospatial information.
11. Apply spatial data ethics in public health surveillance and crisis mapping.
12. Investigate data fusion strategies combining social media, sensor, and satellite data.
13. Create reproducible AI-powered geospatial workflows for academic and policy research.

### Target Audiences

1. GIS Analysts and Geospatial Data Scientists
2. Academic Researchers and PhD Students
3. Humanitarian and NGO Workers
4. Environmental Researchers and Conservationists
5. Urban Planners and Public Policy Experts
6. Health Informatics and Epidemiology Professionals
7. Social Scientists and Sociologists
8. Data Ethics and AI Governance Specialists

**Course Duration:** 5 days

### Course Modules

#### Module 1: Introduction to GeoAI and Sensitive Spatial Research

- Define GeoAI and its intersection with spatial research
- Identify examples of sensitive topics (conflict, surveillance, public health)
- Understand data sensitivity and ethical implications
- Review use cases of GeoAI in humanitarian and crisis contexts
- Explore relevant laws and ethical guidelines (e.g., GDPR, PEPFAR)
- **Case Study:** Mapping COVID-19 hotspots using GeoAI and satellite data

#### Module 2: Data Collection, Privacy, and Anonymization

- Methods for collecting spatial data ethically
- Techniques for anonymizing geolocation and demographic data
- Risks of re-identification in spatial datasets
- Informed consent in geospatial research
- Legal considerations for sensitive datasets (e.g., HIPAA, COPPA)
- **Case Study:** Anonymizing refugee movement data in crisis zones

#### Module 3: Machine Learning for Sensitive Spatial Analysis

- Overview of ML algorithms in geospatial context
- Supervised vs. unsupervised learning for spatial clustering
- Handling small or imbalanced sensitive datasets
- Predictive modeling in humanitarian scenarios
- Preventing overfitting and bias in sensitive datasets
- **Case Study:** Predicting food insecurity zones using ML and weather data

#### **Module 4: Deep Learning and Satellite Imagery in GeoAI**

- Applying CNNs to satellite imagery
- Object detection in sensitive environments (e.g., informal settlements)
- Interpreting visual AI outputs in risk-prone areas
- Preprocessing and normalizing imagery data
- Tools: Google Earth Engine, Sentinel Hub, PyTorch
- **Case Study:** Detecting illegal mining in protected forests using deep learning

#### **Module 5: Ethical AI and Bias Mitigation in GeoAI**

- Understanding algorithmic bias in AI systems
- Bias auditing tools for geospatial AI
- Culturally aware and inclusive model design
- Interdisciplinary ethics review processes
- Transparency and explainability in GeoAI models
- **Case Study:** Uncovering racial bias in predictive policing maps

#### **Module 6: Integrating Open-Source Tools for GeoAI**

- QGIS and PostGIS for spatial data analysis
- Python libraries: GeoPandas, Rasterio, Scikit-learn
- AI-geo toolkits and automation frameworks
- Cloud computing and scalable pipelines (AWS/GCP)
- Version control and reproducibility in workflows
- **Case Study:** Real-time flood detection using open-source pipelines

#### **Module 7: Communication and Visualization of Sensitive GeoAI Insights**

- Creating effective maps for sensitive subjects
- Designing privacy-conscious dashboards (e.g., Power BI, Tableau)
- Storytelling with spatial data while avoiding harm
- Data redaction and visual obfuscation techniques
- Public engagement and policy influence strategies
- **Case Study:** Visualizing gender-based violence data with sensitivity

#### **Module 8: Responsible Deployment and Governance in Spatial AI**

- Frameworks for responsible innovation (e.g., IEEE, UNESCO AI principles)
- Stakeholder engagement and impact assessments
- Open data vs. controlled access in sensitive research
- Institutional governance and audit trails
- Sustainability and exit strategies in spatial AI projects
- **Case Study:** Governance of AI-driven land tenure systems in indigenous communities

#### **Training Methodology**

- Expert-led interactive lectures to introduce GeoAI concepts and ethical frameworks
- Hands-on exercises using Python, QGIS, and AI models on real-world spatial datasets

- Case-based learning to contextualize tools in sensitive and ethical dilemmas
- Group discussions on bias, governance, and cultural considerations in AI
- Project-based assessment requiring each participant to develop a responsible GeoAI use case

### Register as a group from 3 participants for a Discount

Send us an email: [info@fineskilltrainingcenter.com](mailto:info@fineskilltrainingcenter.com) or call +254769199797

### Certification

*Upon successful completion of this training, participants will be issued with a globally- recognized certificate.*

### Tailor-Made Course

*We also offer tailor-made courses based on your needs.*

### Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

## Upcoming Scheduled Sessions

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 07 Sep 2026 | 11 Sep 2026 | Physical | \$1,500 |
| 14 Sep 2026 | 18 Sep 2026 | Physical | \$1,500 |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$1,500 |
| 28 Sep 2026 | 02 Oct 2026 | Physical | \$1,500 |
| 05 Oct 2026 | 09 Oct 2026 | Physical | \$1,500 |
| 12 Oct 2026 | 16 Oct 2026 | Physical | \$1,500 |
| 19 Oct 2026 | 23 Oct 2026 | Physical | \$1,500 |

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 26 Oct 2026 | 30 Oct 2026 | Physical | \$1,500 |
