

Industrial Equipment Reliability in Manufacturing Training Course

Professional Development Training Course Outline

Category	Manufacturing	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Industrial Equipment Reliability in Manufacturing is a critical discipline that ensures production systems operate at optimal performance with minimal downtime, reduced maintenance costs, and improved asset lifespan. In today’s competitive manufacturing environment, organizations are increasingly adopting predictive maintenance, condition monitoring, reliability-centered maintenance (RCM), and asset performance management (APM) strategies to enhance operational efficiency. Industrial Equipment Reliability in Manufacturing Training Course is designed to equip professionals with advanced knowledge of equipment reliability engineering, failure analysis, root cause diagnostics, and maintenance optimization techniques aligned with Industry 4.0 standards.

With the rise of smart manufacturing, IoT-enabled predictive analytics, AI-driven maintenance systems, and digital twin technology, industrial reliability has become a cornerstone of modern production excellence. This course provides a structured approach to understanding mechanical integrity, vibration analysis, lubrication management, and lifecycle asset optimization. Participants will gain practical expertise in reducing unplanned downtime, improving Overall Equipment Effectiveness (OEE), and implementing world-class reliability strategies that drive productivity, safety, and profitability in manufacturing operations.

Programme Curriculum

Industrial Equipment Reliability in Manufacturing Training Course

Introduction

Industrial Equipment Reliability in Manufacturing is a critical discipline that ensures production systems operate at optimal performance with minimal downtime, reduced maintenance costs, and improved asset lifespan. In today’s competitive manufacturing environment, organizations are increasingly adopting predictive maintenance, condition monitoring, reliability-centered maintenance (RCM), and asset performance

management (APM) strategies to enhance operational efficiency. Industrial Equipment Reliability in Manufacturing Training Course is designed to equip professionals with advanced knowledge of equipment reliability engineering, failure analysis, root cause diagnostics, and maintenance optimization techniques aligned with Industry 4.0 standards.

With the rise of smart manufacturing, IoT-enabled predictive analytics, AI-driven maintenance systems, and digital twin technology, industrial reliability has become a cornerstone of modern production excellence. This course provides a structured approach to understanding mechanical integrity, vibration analysis, lubrication management, and lifecycle asset optimization. Participants will gain practical expertise in reducing unplanned downtime, improving Overall Equipment Effectiveness (OEE), and implementing world-class reliability strategies that drive productivity, safety, and profitability in manufacturing operations.

Course Duration

10 days

Course Objectives

1. Master Industrial Equipment Reliability Engineering principles
2. Implement Predictive Maintenance (PdM) strategies using real-time data
3. Apply Root Cause Failure Analysis (RCFA) techniques
4. Optimize Asset Performance Management (APM) systems
5. Improve Overall Equipment Effectiveness (OEE) in manufacturing plants
6. Develop Reliability-Centered Maintenance (RCM) programs
7. Utilize Condition Monitoring and Vibration Analysis tools
8. Enhance Failure Mode and Effects Analysis (FMEA) capabilities
9. Reduce unplanned downtime and maintenance costs
10. Integrate Industrial IoT (IIoT) for smart maintenance systems
11. Strengthen Mechanical Integrity and Asset Life Cycle Management
12. Implement Lean Maintenance and TPM (Total Productive Maintenance)
13. Build data-driven decision-making in maintenance operations

Target Audience

1. Maintenance Engineers and Supervisors
2. Reliability Engineers and Analysts
3. Plant Managers and Production Managers
4. Mechanical and Industrial Engineers
5. Asset Management Professionals
6. Operations and Manufacturing Executives
7. Condition Monitoring Technicians
8. Engineering Students specializing in Manufacturing Systems

Course Modules

Module 1: Fundamentals of Equipment Reliability

- Introduction to reliability engineering concepts
- Key reliability performance indicators
- Understanding failure patterns in machinery
- Reliability vs maintenance concepts

- Industrial benchmarks in manufacturing
- **Case Study:** Automotive assembly plant reducing downtime through reliability benchmarking

Module 2: Predictive Maintenance (PdM) Systems

- Condition-based maintenance strategies
- Sensor integration and data capture
- AI-based failure prediction models
- Maintenance scheduling optimization
- PdM implementation framework
- **Case Study:** FMCG plant adopting predictive maintenance to reduce breakdowns

Module 3: Root Cause Failure Analysis (RCFA)

- Failure investigation techniques
- Data collection and analysis tools
- Fault tree analysis methods
- Corrective action planning
- Reporting and documentation
- **Case Study:** Steel manufacturing plant eliminating recurring gearbox failures

Module 4: Reliability-Centered Maintenance (RCM)

- RCM decision-making process
- Critical asset identification
- Maintenance task optimization
- Risk-based maintenance planning
- Implementation roadmap
- **Case Study:** Power generation facility optimizing maintenance costs using RCM

Module 5: Condition Monitoring Techniques

- Vibration analysis fundamentals
- Thermography and infrared scanning
- Oil and lubricant analysis
- Acoustic emission monitoring
- Real-time diagnostics
- **Case Study:** Cement plant detecting early bearing failures using vibration analysis

Module 6: Failure Mode and Effects Analysis (FMEA)

- Risk prioritization methods
- Severity, occurrence, detection scoring
- Design and process FMEA
- Mitigation strategies
- Continuous improvement integration
- **Case Study:** Pharmaceutical plant improving reliability through FMEA application

Module 7: Industrial IoT in Maintenance

- Smart sensors and connectivity
- Data acquisition systems

- Cloud-based monitoring platforms
- Predictive analytics integration
- Cybersecurity considerations
- **Case Study:** Smart factory implementing IIoT for real-time equipment tracking

Module 8: Asset Performance Management (APM)

- APM frameworks and architecture
- KPI tracking and dashboards
- Digital twin applications
- Maintenance optimization tools
- Cost-benefit analysis
- **Case Study:** Oil refinery improving asset uptime using APM systems

Module 9: Total Productive Maintenance (TPM)

- Autonomous maintenance principles
- Operator involvement strategies
- Equipment efficiency improvement
- TPM pillars implementation
- Workplace organization (5S)
- **Case Study:** Electronics manufacturing plant achieving zero breakdown TPM model

Module 10: Lubrication Management

- Lubricant selection and classification
- Oil analysis and contamination control
- Lubrication schedules optimization
- Failure prevention through lubrication
- Best industry practices
- **Case Study:** Heavy machinery plant extending asset life via lubrication optimization

Module 11: Mechanical Integrity Management

- Structural integrity of equipment
- Inspection and testing methods
- Corrosion control strategies
- Asset life extension techniques
- Compliance standards
- **Case Study:** Petrochemical plant preventing catastrophic equipment failures

Module 12: Reliability Data Analytics

- Data collection techniques
- KPI dashboards for maintenance
- Statistical reliability models
- Machine learning in maintenance
- Decision-making insights
- **Case Study:** Food processing plant improving uptime using analytics dashboards

Module 13: Maintenance Planning and Scheduling

- Job planning workflows
- Resource allocation optimization
- Shutdown and turnaround planning
- Spare parts management
- Workflow automation
- **Case Study:** Automotive plant reducing maintenance backlog by 40%

Module 14: Lean Maintenance Practices

- Waste reduction in maintenance
- Value stream mapping
- Continuous improvement tools
- Kaizen in maintenance
- Efficiency optimization
- **Case Study:** Textile manufacturing plant improving efficiency through lean maintenance

Module 15: Digital Transformation in Reliability

- Industry 4.0 integration
- AI-driven maintenance systems
- Digital twin simulation
- Smart factory implementation
- Future trends in reliability engineering
- **Case Study:** Global manufacturing firm transitioning to fully digital maintenance ecosystem

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.com or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.

- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	18 Sep 2026	Physical	\$3,000
14 Sep 2026	25 Sep 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
28 Sep 2026	09 Oct 2026	Physical	\$3,000
05 Oct 2026	16 Oct 2026	Physical	\$3,000
12 Oct 2026	23 Oct 2026	Physical	\$3,000
19 Oct 2026	30 Oct 2026	Physical	\$3,000
26 Oct 2026	06 Nov 2026	Physical	\$3,000
