

Machine Learning for Climate Modeling Training Course

Professional Development Training Course Outline

Category	Research and Data Analysis	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Machine Learning for Climate Modeling Training Course is designed to equip participants with the knowledge and practical skills needed to harness the power of machine learning (ML) in addressing climate change challenges. With the increasing urgency of climate action, this course integrates state-of-the-art machine learning algorithms and big data analytics into climate science. Participants will learn to analyze complex climate datasets, model future scenarios, and interpret results to support sustainable environmental strategies.

Incorporating predictive modeling, deep learning, and AI-driven climate simulation tools, the course empowers professionals and researchers to develop robust climate models. Whether you're a data scientist, environmental researcher, or policy advisor, this course offers practical exposure to climate informatics, supervised learning techniques, spatial-temporal analysis, and real-world applications in climate risk assessment and forecasting.

Programme Curriculum

Machine Learning for Climate Modeling Training Course

Introduction

Machine Learning for Climate Modeling Training Course is designed to equip participants with the knowledge and practical skills needed to harness the power of machine learning (ML) in addressing climate change challenges. With the increasing urgency of climate action, this course integrates state-of-the-art machine learning algorithms and big data analytics into climate science. Participants will learn to analyze complex climate datasets, model future scenarios, and interpret results to support sustainable environmental strategies.

Incorporating predictive modeling, deep learning, and AI-driven climate simulation tools, the course empowers professionals and researchers to develop robust climate models. Whether you're a data scientist, environmental researcher,

or policy advisor, this course offers practical exposure to climate informatics, supervised learning techniques, spatial-temporal analysis, and real-world applications in climate risk assessment and forecasting.

Course Objectives

1. Understand the fundamentals of machine learning in the context of climate modeling.
2. Apply supervised and unsupervised learning techniques to climate data.
3. Utilize deep learning for pattern recognition in climate systems.
4. Analyze satellite and remote sensing data using ML tools.
5. Develop predictive models for climate trends and variability.
6. Explore neural networks for environmental pattern detection.
7. Integrate ML into global and regional climate models.
8. Evaluate ML model performance using appropriate metrics.
9. Implement climate risk assessment using ML forecasting.
10. Apply data preprocessing techniques to climate datasets.
11. Conduct spatial-temporal data analysis for environmental systems.
12. Visualize climate data using ML-enhanced tools.
13. Build ML pipelines for end-to-end climate simulation projects.

Target Audiences

1. Data Scientists
2. Climate Change Researchers
3. Environmental Engineers
4. Meteorologists
5. AI and ML Developers
6. Public Policy Analysts
7. GIS Specialists
8. University Students and Academics

Course Duration: 10 days

Course Modules

Module 1: Introduction to Climate Modeling and Machine Learning

- Basics of climate modeling and ML integration
- Types of climate data and sources
- Overview of climate prediction models
- Key ML techniques for climate analysis
- Introduction to tools (Python, R, TensorFlow)
- **Case Study: ML for Global Warming Trend Analysis**

Module 2: Data Collection and Preprocessing

- Climate data formats and structures
- Handling missing and noisy data
- Feature selection and engineering
- Data normalization and scaling
- Use of climate data portals (NOAA, NASA)
- **Case Study: Preprocessing Global Climate Datasets**

Module 3: Supervised Learning for Climate Trends

- Linear and logistic regression applications

- Decision trees and random forests
- Support vector machines in climate modeling
- Model validation and tuning
- Training ML models on climate trends
- **Case Study: Predicting Rainfall Using Random Forests**

Module 4: Unsupervised Learning and Pattern Detection

- Clustering algorithms (K-Means, DBSCAN)
- Dimensionality reduction (PCA, t-SNE)
- Identifying patterns in ocean currents and temperatures
- Anomaly detection for extreme weather
- Climate zones classification
- **Case Study: Detecting Climate Regime Shifts**

Module 5: Deep Learning and Neural Networks in Climate Science

- Convolutional neural networks for satellite image analysis
- Recurrent neural networks for time-series forecasting
- Autoencoders for climate feature extraction
- Training models using GPU acceleration
- TensorFlow/Keras implementation examples
- **Case Study: Sea Surface Temperature Prediction using CNN**

Module 6: Spatial-Temporal Analysis of Climate Data

- Understanding geospatial climate data
- Working with raster and vector datasets
- Temporal dynamics and trend analysis
- Geospatial ML techniques
- Mapping tools and visual analytics
- **Case Study: Analyzing Temperature Shifts Over Time and Space**

Module 7: Satellite Data Processing Using ML

- Overview of remote sensing platforms
- Extracting features from MODIS/Landsat imagery
- Classification of land cover and vegetation
- ML for atmospheric composition analysis
- Fusion of multi-source datasets
- **Case Study: Forest Loss Detection with Satellite Imagery**

Module 8: Climate Risk Modeling and Forecasting

- Risk assessment frameworks using ML
- Probabilistic forecasting techniques
- Modeling droughts, floods, and hurricanes
- Real-time monitoring and alert systems
- Integrating ML with early warning systems
- **Case Study: Forecasting Drought Risk in Sub-Saharan Africa**

Module 9: Ethics and Bias in Climate ML Models

- Bias and fairness in environmental data
- Data ethics in climate modeling
- Socio-environmental impacts of ML decisions

- Transparency and explainability of models
- Responsible AI for climate research
- **Case Study: Bias Detection in Urban Heat Modeling**

Module 10: Climate Informatics and Interdisciplinary Research

- Interfacing ML with climate science disciplines
- Collaboration across environmental domains
- Data interoperability and standards
- Use of knowledge graphs in climate data
- Citizen science and participatory modeling
- **Case Study: Community-Driven Climate Monitoring with ML**

Module 11: Cloud-Based Climate Modeling Platforms

- Introduction to Google Earth Engine and AWS
- Setting up ML pipelines on the cloud
- Processing large climate datasets
- Deploying models on scalable platforms
- Cost optimization in cloud ML projects
- **Case Study: Cloud-Based Temperature Forecasting Model**

Module 12: Model Evaluation and Deployment

- Metrics for model performance (MAE, RMSE, etc.)
- Cross-validation and A/B testing
- Real-world validation using historical data
- Creating dashboards for model results
- Model deployment using Flask/Streamlit
- **Case Study: Deploying a Climate Impact Forecasting App**

Module 13: Climate Policy and Decision Support Systems

- Using ML models in policy making
- Environmental decision-making frameworks
- Integrating with GIS-based planning tools
- Communicating ML insights to stakeholders
- Visualization for policymakers
- **Case Study: ML-Driven Decision Support for Coastal Cities**

Module 14: Future Trends in AI for Climate

- Emerging ML techniques in climate modeling
- Role of quantum computing and edge AI
- Integration with IoT climate sensors
- Climate-aware generative AI models
- Interoperability with Earth System Models
- **Case Study: Next-Gen AI Models for Urban Climate Monitoring**

Module 15: Capstone Project

- Define a real-world climate modeling challenge
- Collect and preprocess appropriate data
- Apply ML techniques learned throughout the course
- Build, test, and deploy a working model
- Present project outcomes to a panel

- **Case Study: Student-Led Climate Adaptation ML Project**

Training Methodology

- Instructor-led interactive sessions
- Hands-on coding labs and notebook exercises
- Real-time case study walkthroughs
- Collaborative group projects and peer feedback
- End-of-module assessments and quizzes
- Capstone project with mentorship support

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.com or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	18 Sep 2026	Physical	\$3,000
14 Sep 2026	25 Sep 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
28 Sep 2026	09 Oct 2026	Physical	\$3,000

Start Date	End Date	Location	Price
05 Oct 2026	16 Oct 2026	Physical	\$3,000
12 Oct 2026	23 Oct 2026	Physical	\$3,000
19 Oct 2026	30 Oct 2026	Physical	\$3,000
26 Oct 2026	06 Nov 2026	Physical	\$3,000
