

Machine Learning for Researchers in Advanced Concepts Training Course

Professional Development Training Course Outline

Category	Research and Data Analysis	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today's data-driven research environment, mastering advanced machine learning (ML) concepts is crucial for researchers seeking to make cutting-edge discoveries, automate analysis, and enhance predictive accuracy. Machine Learning for Researchers in Advanced Concepts Training Course is a specialized program designed to equip academic and professional researchers with advanced tools and techniques in deep learning, neural networks, feature engineering, unsupervised learning, and model optimization. This course integrates real-world case studies, research-based modeling, and high-impact algorithmic strategies to support evidence-based outcomes in scientific, medical, financial, and technological research sectors.

Whether you're working in healthcare informatics, genomics, climate research, or social sciences, this training is tailored to provide the technical depth and practical implementation knowledge needed for high-performance, publication-worthy models. This hands-on, intensive training combines theory with practice using Python, TensorFlow, PyTorch, and Scikit-learn—empowering researchers to confidently tackle complex data challenges and produce robust, reproducible results using machine learning at an advanced level.

Programme Curriculum

Machine Learning for Researchers in Advanced Concepts Training Course

Introduction

In today's data-driven research environment, mastering advanced machine learning (ML) concepts is crucial for researchers seeking to make cutting-edge discoveries, automate analysis, and enhance predictive accuracy. Machine Learning for Researchers in Advanced Concepts Training Course is a specialized program designed to equip academic and professional researchers with advanced tools and techniques in deep learning, neural networks, feature engineering, unsupervised learning, and model optimization. This course integrates real-world case studies, research-based modeling, and high-

impact algorithmic strategies to support evidence-based outcomes in scientific, medical, financial, and technological research sectors.

Whether you're working in healthcare informatics, genomics, climate research, or social sciences, this training is tailored to provide the technical depth and practical implementation knowledge needed for high-performance, publication-worthy models. This hands-on, intensive training combines theory with practice using Python, TensorFlow, PyTorch, and Scikit-learn—empowering researchers to confidently tackle complex data challenges and produce robust, reproducible results using machine learning at an advanced level.

Course Objectives

Participants will:

1. Apply advanced supervised and unsupervised machine learning techniques in research.
2. Implement neural networks and deep learning algorithms using Python frameworks.
3. Evaluate model performance using metrics such as ROC, AUC, and F1-score.
4. Conduct research-level feature engineering and dimensionality reduction.
5. Use ensemble learning and boosting algorithms for enhanced accuracy.
6. Apply transfer learning to domain-specific problems in research.
7. Build end-to-end ML pipelines for academic and industrial research.
8. Integrate Explainable AI (XAI) in ML models for ethical research insights.
9. Automate hyperparameter tuning for optimal research model outputs.
10. Use time-series forecasting for research involving temporal data.
11. Incorporate ML with big data analytics using Spark and Hadoop.
12. Validate and replicate ML findings for peer-reviewed publications.
13. Translate research problems into ML-driven solutions with scalability.

Target Audiences

1. Academic researchers in science and engineering
2. Data scientists transitioning to research domains
3. PhD and postgraduate students
4. AI/ML engineers working on research-grade models
5. Healthcare and medical researchers
6. Social science researchers using big data
7. Environmental and climate researchers
8. Financial analysts conducting algorithmic modeling

Course Duration: 5 days

Course Modules

Module 1: Advanced Supervised Learning Techniques

- Deep dive into classification and regression
- Use of SVMs, Random Forests, and XGBoost
- Handling class imbalance in research datasets
- Evaluation metrics: precision, recall, AUC
- Feature importance and selection strategies
- *Case Study: Predictive modeling in epidemiology research*

Module 2: Deep Learning and Neural Networks

- Architecture of deep neural networks
- CNNs and RNNs in research applications
- Transfer learning using pre-trained models

- GPU acceleration with TensorFlow and PyTorch
- Optimizing model convergence and loss
- *Case Study: Brain image analysis using CNNs*

Module 3: Feature Engineering and Dimensionality Reduction

- Feature extraction from unstructured data
- Principal Component Analysis (PCA)
- Autoencoders for feature reduction
- Correlation analysis in scientific data
- Standardization and normalization
- *Case Study: Genomic data compression using PCA*

Module 4: Ensemble Methods and Boosting

- Bagging vs. boosting overview
- Implementing AdaBoost, XGBoost, and LightGBM
- Reducing overfitting with ensemble models
- Model averaging and stacking
- Bias-variance tradeoff insights
- *Case Study: Financial forecasting using XGBoost*

Module 5: Unsupervised Learning and Clustering

- K-Means, DBSCAN, and hierarchical clustering
- Dimensionality reduction before clustering
- Clustering evaluation and validation
- Anomaly detection in scientific datasets
- Topic modeling with LDA for textual data
- *Case Study: Identifying disease clusters in healthcare data*

Module 6: Time Series and Forecasting Techniques

- Introduction to time-series ML
- ARIMA, Prophet, and LSTM models
- Stationarity and differencing
- Lag features and rolling statistics
- Performance evaluation in forecasting
- *Case Study: Climate trend analysis using LSTM*

Module 7: Explainable AI and Model Interpretability

- Interpreting black-box models with SHAP
- Ethics and transparency in AI
- Visualizing model decisions
- Trust-building in research applications
- Regulatory and compliance considerations
- *Case Study: Explaining AI decisions in diagnostic tools*

Module 8: Building Reproducible ML Research Pipelines

- Data versioning with DVC and Git
- ML pipeline automation with MLFlow
- Integration with research documentation
- Containerization with Docker for deployment
- Managing experiments and artifacts

- *Case Study: Automated pipeline for psychological behavior analysis*

Training Methodology

- Instructor-led virtual sessions with interactive labs
- Real-world datasets for hands-on practice
- Research-based assignments and peer reviews
- Access to pre-recorded materials and coding notebooks
- Capstone project for research publication readiness

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.com or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	\$1,500
14 Sep 2026	18 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$1,500
05 Oct 2026	09 Oct 2026	Physical	\$1,500

Start Date	End Date	Location	Price
12 Oct 2026	16 Oct 2026	Physical	\$1,500
19 Oct 2026	23 Oct 2026	Physical	\$1,500
26 Oct 2026	30 Oct 2026	Physical	\$1,500
