

Measuring Road Safety Performance Indicators (KPIs) Training Course

Professional Development Training Course Outline

Category	Traffic Management & Road Safety	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today's rapidly evolving transportation ecosystem, road safety has become a critical priority for governments, transport agencies, and urban planners worldwide. The ability to measure, analyze, and optimize Road Safety Performance Indicators (KPIs) is pivotal in reducing accidents, fatalities, and economic losses. Measuring Road Safety Performance Indicators (KPIs) Training Course empowers professionals with the latest data-driven methodologies, safety analytics, and performance measurement tools, enabling evidence-based decision-making and fostering a sustainable, safer road network. By integrating global best practices, predictive analytics, and real-world case studies, participants will gain actionable insights to monitor, benchmark, and enhance road safety outcomes effectively.

Participants will explore cutting-edge techniques for collecting, analyzing, and interpreting key road safety metrics, including accident frequency, severity, infrastructure risks, and behavioral indicators. The course emphasizes hands-on learning, ensuring that participants can translate theoretical concepts into practical interventions and policy recommendations. By leveraging smart data analytics, GIS mapping, and AI-driven safety models, this training equips professionals to proactively identify risk hotspots, implement preventive strategies, and evaluate the impact of safety programs. Ultimately, attendees will emerge as road safety champions, capable of driving measurable improvements across urban and rural road networks.

Programme Curriculum

Measuring Road Safety Performance Indicators (KPIs) Training Course

Introduction

In today's rapidly evolving transportation ecosystem, road safety has become a critical priority for governments, transport agencies, and urban planners worldwide. The ability to measure, analyze, and optimize Road Safety

Performance Indicators (KPIs) is pivotal in reducing accidents, fatalities, and economic losses. Measuring Road Safety Performance Indicators (KPIs) Training Course empowers professionals with the latest data-driven methodologies, safety analytics, and performance measurement tools, enabling evidence-based decision-making and fostering a sustainable, safer road network. By integrating global best practices, predictive analytics, and real-world case studies, participants will gain actionable insights to monitor, benchmark, and enhance road safety outcomes effectively.

Participants will explore cutting-edge techniques for collecting, analyzing, and interpreting key road safety metrics, including accident frequency, severity, infrastructure risks, and behavioral indicators. The course emphasizes hands-on learning, ensuring that participants can translate theoretical concepts into practical interventions and policy recommendations. By leveraging smart data analytics, GIS mapping, and AI-driven safety models, this training equips professionals to proactively identify risk hotspots, implement preventive strategies, and evaluate the impact of safety programs. Ultimately, attendees will emerge as road safety champions, capable of driving measurable improvements across urban and rural road networks.

Course Duration

5 days

Course Objectives

1. Understand the fundamentals of Road Safety Performance Indicators (KPIs) and their significance in traffic management.
2. Identify and analyze high-risk locations and accident-prone zones using predictive analytics.
3. Implement data-driven road safety monitoring frameworks for urban and rural networks.
4. Develop evidence-based interventions to reduce traffic fatalities and injuries.
5. Apply advanced traffic safety analytics tools including GIS, AI, and big data.
6. Measure the effectiveness of road safety policies and programs.
7. Design key metrics dashboards for monitoring road safety performance.
8. Interpret and report crash statistics, injury severity, and behavioral KPIs.
9. Benchmark road safety standards against national and international guidelines.
10. Conduct risk assessments and prioritize mitigation strategies.
11. Integrate smart transportation technologies for proactive road safety management.
12. Evaluate infrastructure design, traffic flow, and vehicle safety compliance.
13. Build capacity in road safety project planning, monitoring, and continuous improvement.

Target Audience

1. Road safety engineers
2. Traffic management professionals
3. Urban planners and transport authorities
4. Highway and infrastructure consultants
5. Policy makers and government regulators
6. Accident investigation specialists
7. Transport data analysts and researchers
8. Road safety NGOs and advocacy groups

Course Modules

Module 1: Introduction to Road Safety KPIs

- Overview of road safety metrics and global standards
- Understanding KPI frameworks and definitions
- Role of KPIs in strategic traffic management
- Linking KPIs with Sustainable Development Goals (SDGs)
- **Case Study:** Success story of KPI implementation in a European city

Module 2: Data Collection & Crash Analysis

- Methods for collecting traffic accident and behavior data
- Integrating police, hospital, and insurance reports
- Data cleaning and validation techniques
- Using GIS and mapping tools for visualization
- **Case Study:** Crash data analytics for urban hotspots

Module 3: Risk Assessment & Prioritization

- Identifying high-risk zones and accident patterns
- Traffic volume and road user behavior analysis
- Severity-based risk scoring methods
- Prioritization of interventions using KPIs
- **Case Study:** Road safety risk assessment in a metropolitan area

Module 4: KPI Measurement & Monitoring Techniques

- Selection of relevant KPIs for different road networks
- Dashboard creation and performance monitoring
- Benchmarking KPIs against local and global standards
- Automated reporting tools and visualization
- **Case Study:** KPI dashboard for a national highway project

Module 5: Infrastructure & Road Design Evaluation

- Assessing road geometry, signage, and lighting impact
- Evaluating pedestrian and cyclist safety
- Integrating intelligent transport systems (ITS)
- Infrastructure retrofitting for improved safety
- **Case Study:** Redesign of a high-risk intersection

Module 6: Behavioral Analysis & Safety Culture

- Studying driver, pedestrian, and cyclist behavior
- Role of enforcement and awareness campaigns
- Traffic psychology and decision-making metrics
- Community engagement for safety improvements
- **Case Study:** Behavioral intervention reducing urban accidents

Module 7: Predictive Analytics & AI Applications

- Machine learning models for accident prediction
- Forecasting high-risk zones using historical data
- Smart traffic management systems integration
- Evaluating effectiveness of AI-based interventions

- **Case Study:** AI-driven accident prevention in smart cities

Module 8: Evaluation & Continuous Improvement

- KPI-based evaluation of road safety projects
- Feedback loops for policy refinement
- Implementing continuous monitoring systems
- Reporting for stakeholders and government authorities
- **Case Study:** Continuous improvement model for a state road network

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	\$1,500
14 Sep 2026	18 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$1,500
05 Oct 2026	09 Oct 2026	Physical	\$1,500
12 Oct 2026	16 Oct 2026	Physical	\$1,500
19 Oct 2026	23 Oct 2026	Physical	\$1,500
26 Oct 2026	30 Oct 2026	Physical	\$1,500
