

# Reinforcement Learning for Research Applications Training Course

## Professional Development Training Course Outline

|          |                            |               |                         |
|----------|----------------------------|---------------|-------------------------|
| Category | Research and Data Analysis | Duration      | 5 Days                  |
| Base Fee | \$1,500 USD                | Delivery Mode | Online / On-site Hybrid |

### Course Introduction

Reinforcement Learning (RL) is rapidly transforming the research landscape across fields such as artificial intelligence, robotics, behavioral economics, healthcare, and environmental modeling. Reinforcement Learning for Research Applications Training Course offers an in-depth, hands-on understanding of how RL algorithms learn from environments through trial-and-error interactions to optimize decision-making strategies. By combining advanced theoretical insights with real-world research applications, this course enables researchers, data scientists, and AI practitioners to leverage RL for experimental modeling, predictive analytics, and simulation-driven optimization.

In a digital age where data-driven solutions are pivotal, reinforcement learning stands out as a powerful tool for solving complex research problems. This course uses trending machine learning techniques, cutting-edge tools like OpenAI Gym, TensorFlow, and PyTorch, and explores how to apply RL to real-time research scenarios such as climate modeling, healthcare diagnosis, drug discovery, finance, and autonomous systems. Learners will gain hands-on experience building, tuning, and deploying RL models in varied research contexts, bridging the gap between theoretical exploration and impactful implementation.

### Programme Curriculum

#### Reinforcement Learning for Research Applications Training Course

##### Introduction

Reinforcement Learning (RL) is rapidly transforming the research landscape across fields such as artificial intelligence, robotics, behavioral economics, healthcare, and environmental modeling. Reinforcement Learning for Research Applications Training Course offers an in-depth, hands-on understanding of how RL algorithms learn from environments through trial-and-error interactions to optimize decision-making strategies. By combining advanced theoretical insights with real-world research applications, this course enables researchers, data scientists, and AI practitioners to leverage RL

for experimental modeling, predictive analytics, and simulation-driven optimization.

In a digital age where data-driven solutions are pivotal, reinforcement learning stands out as a powerful tool for solving complex research problems. This course uses trending machine learning techniques, cutting-edge tools like OpenAI Gym, TensorFlow, and PyTorch, and explores how to apply RL to real-time research scenarios such as climate modeling, healthcare diagnosis, drug discovery, finance, and autonomous systems. Learners will gain hands-on experience building, tuning, and deploying RL models in varied research contexts, bridging the gap between theoretical exploration and impactful implementation.

### Course Objectives

1. Understand core concepts of reinforcement learning algorithms and their mathematical foundations.
2. Distinguish between model-based and model-free methods in research settings.
3. Explore value-based, policy-based, and actor-critic methods for advanced modeling.
4. Apply Markov Decision Processes (MDPs) to research-driven problem scenarios.
5. Leverage deep reinforcement learning (DRL) for high-dimensional research data.
6. Utilize tools such as OpenAI Gym, TensorFlow, and PyTorch in real-time projects.
7. Design and evaluate reward structures for research-based experiments.
8. Build and fine-tune RL models for healthcare research and clinical trials.
9. Analyze environment-agent interactions for decision-making models.
10. Apply RL techniques to autonomous systems and robotics simulations.
11. Implement multi-agent reinforcement learning (MARL) in economic and social models.
12. Conduct reproducible RL experiments and track performance metrics.
13. Translate RL models into publishable academic outputs and presentations.

### Target Audience

1. Academic researchers in AI and data science
2. Graduate students in machine learning or computational science
3. AI developers seeking research-oriented applications
4. Healthcare researchers exploring AI integration
5. Environmental scientists applying predictive models
6. Financial analysts modeling complex behaviors
7. Robotics engineers working with autonomous systems
8. Government or NGO data analysts in policy modeling

**Course Duration:** 5 days

### Course Modules

#### Module 1: Introduction to Reinforcement Learning

- Understand RL basics and key terminologies
- Learn the role of agents, environments, and rewards
- Explore differences between RL and supervised learning
- Introduction to OpenAI Gym for research applications
- Overview of Python libraries for RL
- **Case Study:** Using RL in ecological modeling simulations

#### Module 2: Markov Decision Processes (MDPs)

- Define states, actions, rewards in MDPs
- Understand Bellman equations and dynamic programming
- Explore value and policy iteration
- Analyze transition probabilities for real data

- Python-based implementation of MDPs
- **Case Study:** Modeling decision-making in behavioral economics

### **Module 3: Deep Reinforcement Learning**

- Combine deep learning with RL techniques
- Work with Q-learning and deep Q-networks (DQNs)
- Implement convolutional neural networks in RL
- Handle continuous state and action spaces
- Use TensorFlow and PyTorch for DRL
- **Case Study:** Applying DRL to cancer treatment optimization

### **Module 4: Policy Optimization Techniques**

- Understand policy gradients
- Explore actor-critic methods
- Implement REINFORCE algorithm
- Optimize performance using advantage estimation
- Apply PPO and A3C in research
- **Case Study:** Simulating human behavior in psychology studies

### **Module 5: Multi-Agent Reinforcement Learning (MARL)**

- Introduction to multiple agents and environments
- Design communication protocols among agents
- Train agents collaboratively or competitively
- Analyze MARL in social systems
- Investigate coordination vs. competition dynamics
- **Case Study:** Resource allocation modeling in urban planning

### **Module 6: Real-World Applications and Challenges**

- Address ethical considerations in AI-driven research
- Ensure safety and robustness in RL applications
- Deal with sparse or delayed rewards
- Scale RL for complex environments
- Evaluate performance in uncertain settings
- **Case Study:** RL-based traffic system optimization

### **Module 7: Tools and Libraries for RL Research**

- Use OpenAI Gym for simulated environments
- Explore TensorFlow Agents and Stable Baselines3
- Visualize training progress and debugging
- Manage experiments and data logs
- Compare performance across frameworks
- **Case Study:** Comparative study of RL tools in drug design

### **Module 8: Publishing, Reproducibility, and Ethics**

- Format RL experiments for academic papers
- Ensure reproducibility and replicability of models
- Apply open science and open data principles
- Use version control for collaborative research
- Address fairness and bias in AI research
- **Case Study:** Publishing a reproducible RL study in neuroscience

### Training Methodology

- Instructor-led lectures using multimedia presentations
- Hands-on coding exercises and walkthroughs
- Weekly quizzes and peer-reviewed mini-projects
- Group discussions and case study analysis
- Final capstone project based on a research theme
- Access to pre-recorded tutorials and reading materials

### Register as a group from 3 participants for a Discount

Send us an email: [info@fineskilltrainingcenter.com](mailto:info@fineskilltrainingcenter.com) or call +254769199797

### Certification

*Upon successful completion of this training, participants will be issued with a globally- recognized certificate.*

### Tailor-Made Course

*We also offer tailor-made courses based on your needs.*

### Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

## Upcoming Scheduled Sessions

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 07 Sep 2026 | 11 Sep 2026 | Physical | \$1,500 |
| 14 Sep 2026 | 18 Sep 2026 | Physical | \$1,500 |
| 21 Sep 2026 | 25 Sep 2026 | Physical | \$1,500 |
| 28 Sep 2026 | 02 Oct 2026 | Physical | \$1,500 |
| 05 Oct 2026 | 09 Oct 2026 | Physical | \$1,500 |

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 12 Oct 2026 | 16 Oct 2026 | Physical | \$1,500 |
| 19 Oct 2026 | 23 Oct 2026 | Physical | \$1,500 |
| 26 Oct 2026 | 30 Oct 2026 | Physical | \$1,500 |
