Tall Building Systems Engineering Training Course

Professional Development Training Course Outline

Category	Architectural Engineering	**Duration**	5 Days
Base Fee	$1,500 USD	**Delivery Mode**	Online / On-site Hybrid

Course Introduction

Tall buildings represent the pinnacle of modern urban development, requiring highly advanced, integrated, and resilient engineering systems to ensure safety, sustainability, and operational efficiency. The Tall Building Systems Engineering Training Course is designed to equip engineers, architects, and construction professionals with cutting-edge knowledge in high-rise building systems integration, smart building technologies, structural performance optimization, HVAC design for skyscrapers, fire safety engineering, vertical transportation systems, and BIM-driven coordination. As cities grow vertically, mastering these competencies is essential for delivering next-generation super high-rise and mega-tall building infrastructure.

Tall Building Systems Engineering Training Course a deep dive into the interdisciplinary nature of tall building engineering, combining structural systems, mechanical-electrical-plumbing (MEP) coordination, façade engineering, seismic and wind engineering, and intelligent building management systems (BMS). Participants will explore real-world challenges in ultra-tall towers, sustainable skyscraper design, energy-efficient vertical cities, and smart urban infrastructure, enabling them to design and manage buildings that meet global standards such as LEED, WELL, and advanced green building certifications.

Programme Curriculum

Tall Building Systems Engineering Training Course

Introduction

Tall buildings represent the pinnacle of modern urban development, requiring highly advanced, integrated, and resilient engineering systems to ensure safety, sustainability, and operational efficiency. The Tall Building Systems Engineering Training Course is designed to equip engineers, architects, and construction professionals with cutting-edge knowledge in high-rise building systems integration, smart building

technologies, structural performance optimization, HVAC design for skyscrapers, fire safety engineering, vertical transportation systems, and BIM-driven coordination. As cities grow vertically, mastering these competencies is essential for delivering next-generation super high-rise and mega-tall building infrastructure.

Tall Building Systems Engineering Training Course a deep dive into the interdisciplinary nature of tall building engineering, combining structural systems, mechanical-electrical-plumbing (MEP) coordination, façade engineering, seismic and wind engineering, and intelligent building management systems (BMS). Participants will explore real-world challenges in ultra-tall towers, sustainable skyscraper design, energy-efficient vertical cities, and smart urban infrastructure, enabling them to design and manage buildings that meet global standards such as LEED, WELL, and advanced green building certifications.

Course Duration

5 days

Course Objectives

1. Master high-rise structural systems design and analysis
2. Understand advanced wind engineering for skyscrapers
3. Apply seismic-resistant tall building technologies
4. Integrate smart building automation systems (BMS)
5. Optimize HVAC systems for ultra-tall towers
6. Design vertical transportation systems (elevators & escalators)
7. Implement fire safety and evacuation strategies in high-rise buildings
8. Apply BIM-based coordination for tall building projects
9. Develop expertise in energy-efficient skyscraper design
10. Understand sustainable green building certification systems (LEED/WELL)
11. Manage MEP systems integration in complex vertical structures
12. Evaluate façade engineering and high-performance envelope systems
13. Analyze smart city and vertical urban development concepts

Target Audience

1. Civil Engineers specializing in structural design
2. Mechanical & Electrical Engineers (MEP professionals)
3. Architects focused on high-rise and skyscraper design
4. Construction Project Managers
5. Urban Planners and Smart City Consultants
6. BIM Coordinators and Digital Construction Specialists
7. Fire Safety and Risk Management Engineers
8. Real Estate Developers and Infrastructure Investors

Course Modules

Module 1: Fundamentals of Tall Building Engineering

- Evolution of skyscraper design
- Load distribution in vertical structures
- Core structural systems (tube, outrigger, diagrid)
- Introduction to high-rise construction materials
- Global tall building design standards

- **Case Study:** Burj Khalifa structural system analysis and load transfer efficiency

Module 2: Structural Engineering for High-Rise Buildings

- Wind load analysis and mitigation
- Seismic design strategies for tall buildings
- Lateral force-resisting systems
- Structural damping technologies
- Performance-based design principles
- **Case Study:** Taipei 101 tuned mass damper system performance under typhoons

Module 3: Mechanical Systems (HVAC & Environmental Control)

- Vertical HVAC zoning strategies
- Pressurization and stack effect control
- Energy-efficient cooling systems
- Indoor air quality optimization
- Smart climate control systems
- **Case Study:** One World Trade Center HVAC zoning efficiency optimization

Module 4: Electrical & Smart Building Systems

- High-rise power distribution networks
- Emergency backup and redundancy systems
- Building Automation Systems (BMS)
- IoT integration in smart skyscrapers
- Energy monitoring systems
- **Case Study:** The Shard London smart energy management system integration

Module 5: Fire Safety & Life Safety Engineering

- High-rise fire evacuation modeling
- Smoke control systems in vertical buildings
- Fire-resistant materials and design
- Refuge floors and safety zones
- Emergency communication systems
- **Case Study:** Grenfell Tower fire safety system analysis and lessons learned

Module 6: Vertical Transportation Systems

- Elevator grouping and zoning strategies
- Double-deck and high-speed elevators
- Smart traffic control algorithms
- Escalator systems in mega structures
- Energy regeneration in lift systems
- **Case Study:** Shanghai Tower ultra-high-speed elevator performance system

Module 7: BIM & Digital Twin Integration

- BIM coordination in tall buildings
- Clash detection in MEP systems
- 4D and 5D construction modeling

- Digital twin for building lifecycle management
- AI-driven construction optimization
- **Case Study:** Marina Bay Sands BIM integration for multi-tower coordination

Module 8: Sustainable & Smart Urban Skyscrapers

- Green building certification (LEED/WELL)
- Energy-positive skyscraper design
- Smart city integration concepts
- Renewable energy in high-rise systems
- Carbon-neutral building strategies
- **Case Study:** Bosco Verticale vertical forest sustainability performance

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

a. The participant must be conversant with English.

b. Upon completion of training the participant will be issued with an Authorized Training Certificate

c. Course duration is flexible and the contents can be modified to fit any number of days.

d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.

e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to FINESKILL TRAINING CENTER account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
07 Sep 2026	11 Sep 2026	Physical	$1,500
14 Sep 2026	18 Sep 2026	Physical	$1,500
21 Sep 2026	25 Sep 2026	Physical	$1,500
28 Sep 2026	02 Oct 2026	Physical	$1,500
05 Oct 2026	09 Oct 2026	Physical	$1,500
12 Oct 2026	16 Oct 2026	Physical	$1,500
19 Oct 2026	23 Oct 2026	Physical	$1,500
26 Oct 2026	30 Oct 2026	Physical	$1,500
