Training Course on Sustainable Groundwater Management and Recharge

Professional Development Training Course Outline

Category	Agriculture	**Duration**	5 Days
Base Fee	$1,500 USD	**Delivery Mode**	Online / On-site Hybrid

Course Introduction

Groundwater is a vital natural resource that sustains agricultural productivity, urban water supply, ecosystem services, and climate resilience. However, overextraction, pollution, and poor recharge practices have led to the depletion and contamination of aquifers worldwide. Training Course on Sustainable Groundwater Management and Recharge equips participants with the technical expertise and practical tools necessary to protect, manage, and enhance groundwater resources sustainably. Using the latest innovations in aquifer recharge technologies, watershed restoration, and policy frameworks, this course empowers water professionals to make data-driven, eco-conscious, and community-inclusive decisions.

With a growing demand for climate-resilient water systems, it is crucial to strengthen institutional capacity and promote integrated water resource management (IWRM). This course addresses sustainable recharge strategies, stakeholder engagement, digital monitoring tools, and the socio-economic dimensions of groundwater governance. Designed for practitioners, policymakers, and researchers, this training bridges science and practice, ensuring scalable and impactful outcomes aligned with SDG 6 (Clean Water and Sanitation) and global water security goals.

Programme Curriculum

Training Course on Sustainable Groundwater Management and Recharge

Introduction

Groundwater is a vital natural resource that sustains agricultural productivity, urban water supply, ecosystem services, and climate resilience. However, overextraction, pollution, and poor recharge practices have led to the depletion and contamination of aquifers worldwide. Training Course on Sustainable Groundwater Management and Recharge equips participants with the technical expertise and practical tools necessary to protect, manage, and enhance groundwater resources sustainably. Using the latest innovations in aquifer recharge technologies, watershed restoration, and policy frameworks, this course empowers water professionals to make data-driven, eco-conscious, and community-inclusive

decisions.

With a growing demand for climate-resilient water systems, it is crucial to strengthen institutional capacity and promote integrated water resource management (IWRM). This course addresses sustainable recharge strategies, stakeholder engagement, digital monitoring tools, and the socio-economic dimensions of groundwater governance. Designed for practitioners, policymakers, and researchers, this training bridges science and practice, ensuring scalable and impactful outcomes aligned with SDG 6 (Clean Water and Sanitation) and global water security goals.

Course Objectives

By the end of this course, participants will be able to:

1. Understand the fundamentals of aquifer systems and hydrological balance.
2. Identify key causes and impacts of groundwater depletion.
3. Apply integrated water resource management (IWRM) principles.
4. Design effective artificial recharge structures for various terrains.
5. Utilize GIS and remote sensing tools for groundwater mapping.
6. Interpret hydrogeological data for informed decision-making.
7. Develop climate-smart water recharge plans.
8. Implement community-based water management strategies.
9. Monitor groundwater quality and pollution sources.
10. Promote policy and legal frameworks for groundwater sustainability.
11. Incorporate green infrastructure in recharge projects.
12. Conduct cost-benefit analysis of groundwater recharge interventions.
13. Enhance stakeholder collaboration and public-private partnerships (PPPs).

Target Audience

1. Water resource engineers
2. Environmental scientists
3. Agricultural planners
4. Policy makers
5. Urban planners
6. NGO project managers in WASH
7. Hydrologists and hydrogeologists
8. Graduate students and researchers

Course Duration: 5 days

Course Modules

Module 1: Groundwater Hydrology and Aquifer Dynamics

- Aquifer types and recharge zones
- Water table fluctuation and flow mechanics
- Human impact on aquifer health
- Natural vs. artificial recharge
- Tools for aquifer modeling
- *Case Study:* Rajasthan's aquifer recharge management in arid zones

Module 2: Groundwater Depletion: Causes and Impacts

- Over-extraction trends
- Agricultural and industrial demand
- Urbanization and land use change
- Salinization and subsidence

- Ecosystem degradation
- *Case Study:* Groundwater crisis in Central Valley, California

Module 3: Artificial Recharge Technologies

- Recharge wells and shafts
- Check dams and percolation tanks
- Roof water harvesting systems
- Injection methods for stormwater
- Recharge site suitability analysis
- *Case Study:* Managed Aquifer Recharge (MAR) in Australia

Module 4: Monitoring and Mapping Tools

- GIS-based aquifer mapping
- Remote sensing for water levels
- Groundwater modeling software (e.g., MODFLOW)
- Data loggers and piezometers
- Open-source groundwater data platforms
- *Case Study:* Digital groundwater surveillance in Kenya

Module 5: Climate-Resilient Groundwater Planning

- Recharge strategies for drought-prone areas
- Water budgeting under climate variability
- Nature-based solutions
- Multi-sectoral adaptation strategies
- Aligning recharge projects with SDGs
- *Case Study:* Climate adaptation through aquifer recharge in Ethiopia

Module 6: Legal and Policy Frameworks

- National groundwater laws and rights
- Institutional roles and water governance
- Water pricing and regulation
- Transboundary aquifer management
- Role of customary laws and indigenous practices
- *Case Study:* India’s Model Groundwater Bill implementation

Module 7: Community Participation and Social Equity

- Gender-responsive water governance
- Participatory groundwater planning
- Awareness and education campaigns
- Local water user associations
- Social auditing of recharge projects
- *Case Study:* Community-led recharge initiatives in Nepal

Module 8: Sustainable Financing and Partnerships

- Public-private partnership models
- International donor frameworks
- Green bonds and climate financing
- Budget planning for recharge programs
- Monitoring & evaluation of investment outcomes
- *Case Study:* World Bank-funded recharge project in Morocco

Training Methodology

- Interactive expert-led lectures
- Hands-on GIS and recharge planning labs
- Real-world case study analysis
- Group discussions and breakout sessions
- Community recharge simulation workshops
- Participant-led project proposals

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

a. The participant must be conversant with English.

b. Upon completion of training the participant will be issued with an Authorized Training Certificate

c. Course duration is flexible and the contents can be modified to fit any number of days.

d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.

e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
09 Nov 2026	13 Nov 2026	Online	$1,000
09 Nov 2026	13 Nov 2026	Physical	$1,500
09 Nov 2026	13 Nov 2026	Physical	$3,000
09 Nov 2026	13 Nov 2026	Physical	$3,000
09 Nov 2026	13 Nov 2026	Physical	$6,000

Start Date	End Date	Location	Price
09 Nov 2026	13 Nov 2026	Physical	$4,500
09 Nov 2026	13 Nov 2026	Physical	$6,000
09 Nov 2026	13 Nov 2026	Physical	$6,000
